

Jeff Rense Fukushima disinfo exposed

Jeff Rense, 66, riding a \$30,000 Harley Trike, one of a collection of motorcycles, a lifestyle partly supported by donations from his readers.

I live in Niigata Prefecture which is the neighbor of Fukushima just to the west. Since the March 11, 2011 Fukushima nuclear power plant disaster, I've been to Fukushima several times. Once I came as close as 20 kilometers to the damaged nuclear reactors. Nobody I know or even heard of has become sick with radiation poisoning from the damaged Fukushima nuclear powerplant.

The so called alternative media has been spreading, in my opinion, disinformation and **fear mongering** about the March 11, 2011 Fukushima nuclear power plant disaster, making it sound much worse than it really is. Radio talk show host, Joyce Riley of the Power Hour show, said on March 27, 2012, that in 45 days Tokyo will become uninhabitable. She also said there are mass evacuations of US Military dependents from Japan, evacuations from embassies, and that the airports were in chaos, jammed packed with people trying to evacuate. All of this is **false!** Either she was misled or she just **plain lied**. It is now **November 12, 2015**, over three years since Joyce Riley made those statements. Tokyo is business as usual as ever with as many or more foreign tourists as before the 3/11 tsunami and power plant disaster! How do I know that? I pass through Tokyo several times a year and was there just a few weeks ago. I saw those tourists and crowds of people with my own eyes.

Another radio talk show host, Jeff Rense, called the hydrogen explosion that blew the roof off the nuclear power plant, "a small hydrogen bomb." Calling it "a small hydrogen bomb" is misleading. In my opinion it's disinformation, plain and simple. Hydrogen bombs are nuclear devices. The explosion at the Fukushima plants was a *chemical reaction* of hydrogen molecules uniting with oxygen molecules. Hydrogen gas is produced when hot zirconium alloy fuel rods come in contact with water and steam when water is poured on them to try to keep them cool in an emergency. Zirconium has a high affinity for oxygen. It pulls the oxygen molecules out of water releasing water's hydrogen molecules. The hydrogen gas built up and heat from the reactor caused it to explode, meaning, chemically reunite with oxygen forming water again. Any high school kid with a moderate knowledge of chemistry would know that hydrogen burning or exploding is a **chemical** reaction, *not nuclear*. This means Rense is not

only a disinfo agent, he is mocking the intelligence of the American public.

Has Jeff Rense been lying to his listeners? Patsy Smullin who runs KOBI-TV, a TV station that Jeff Rense says he worked for, called him, a compulsive liar

I'm not saying that Fukushima wasn't serious, but was it really worse than Chernobyl as Jeff Rense and others claim? How can it possibly be worse when so far, **not a single person** has died? Only the poor animals, mostly pets and some livestock have died for lack of care being abandoned by their masters. I heard other other day that some of the cattle have learned to fend for themselves and continue to survive.

Why is the alternative media spreading even more fear about Fukushima than the mainstream media is? The only answer I can think of is the alternative media has been making money off selling products that are supposed to protect you from radiation poisoning. Joyce Riley markets a lot of that stuff, and so does Jeff Rense.

Ask yourself this: If Fukushima is as bad as Jeff Rense, Joyce Riley, and others have said, and the Japanese government and Imperial Family know this but are withholding information from public, why are they still all living in Tokyo? Yes, folks, they're still all there engaged in business as usual.
