

# WordPress global search and replace

I moved this site from `blog.jamesjpn.com` to `jamesjpn.net`. A problem I faced was there were 678 lines of code that pointed to photos on the `blog.jamesjpn.com` server and I needed to edit the posts to point the links to the new server on `jamesjpn.net`. Thanks to <http://www.barrywise.com/2009/02/global-find-and-replace-in-wordpress-using-mysql/> I learned how to do a global search and replace in the Sql section of phpMyAdmin!

```
UPDATE wp_posts SET post_content = REPLACE(post_content,  
    'blog.jamesjpn.com', 'jamesjpn.net')
```

It would have taken me a **long time** to do the job by editing each post, whereas Sql did a global search and replace of 678 lines of code in only 0.8187 of a second!
